**MEDICARE INFORMATION**

- Medicare will only pay for tests that meet the Medicare coverage criteria and are reasonable and necessary to treat or diagnose an individual patient. Medicare does not pay for tests for which the documentation in the entire patient record, including that maintained in the physician's records, does not support that the tests were reasonable and necessary for a given patient. Medicare does not cover routine screening tests even if the physician or other authorized test orderer considers the tests appropriate for the patient. The ordering physician is legally responsible for documenting and maintaining the medical necessity of each test in the patient's medical record. Tests submitted for Medicare reimbursement must meet program requirements or the claim may be denied. The OIG takes the position that an individual who knowingly causes a false claim to be submitted may be subject to sanctions or remedies available under civil, criminal and administrative law.

Doctor's Data, Inc. offers customized profiles containing multiple components. Components can be ordered individually and a list of individual components and prices is available upon request. Ordering a customized profile for a Medicare patient may result in the ordering of tests which are not covered, reasonable or necessary.
